## RÉMANENT Release of G'MIC 1.5.8.3

[Ronounours](#) dit :

Here is the changelog :

### New features :

- New plug-in filter 'Frames / Frame [blur]' :

### Improvements :

- Warning messages are suppressed by default when reading some TIFF files using the command line tool 'gmic'.

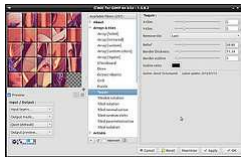

- Lot of small bug fixes. Those bugs have been detected by running valgrind on all code samples used to generate the reference documentation.

- Added compilation macro 'gmic\_check\_image' to enable valid pointer checking.

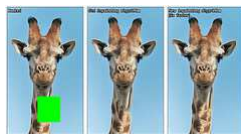

- GIMP plug-in title bar now contains the OS name.

- The patch-based inpainting algorithm used in command '-inpaint\_patch' has been slightly improved.

- Command '-taquin' and associated plug-in filter gets new options :

- Command '-inpaint' has been improved. Results are slightly better, and the computation time has been drastically reduced.

### Bug fixes :

- Fixed some invalid memory accesses when reading command files.
